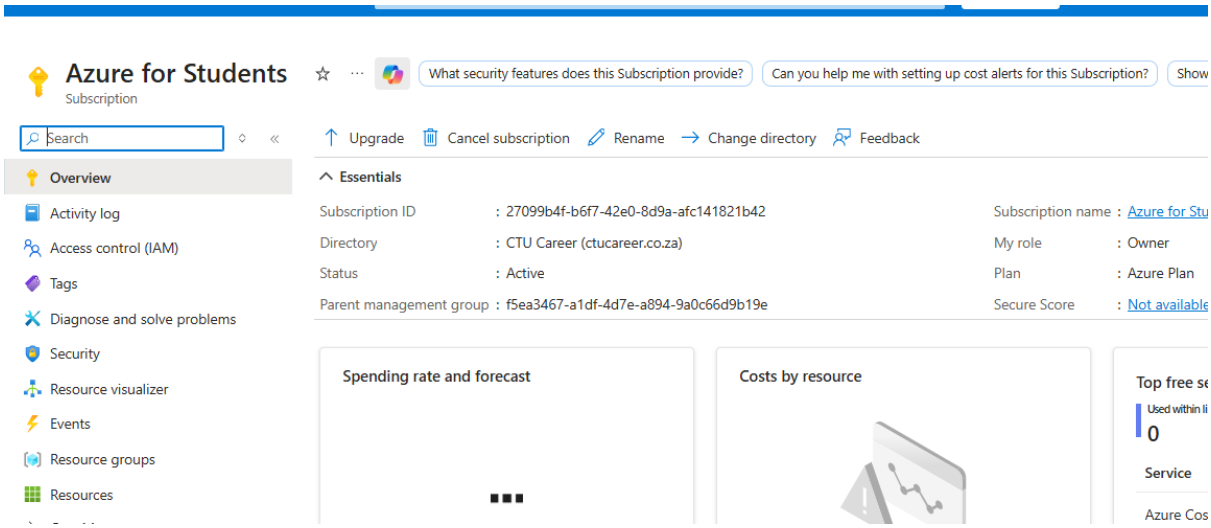
Task 1:



Task2:

CTU training Solutions is a Tertiary education School that has multiple colleges across south Africa, IT mainly has an emphasis on Teaching IT, Engineering and business-related subjects. The IT needs for CTU is rather expansive , there are multiple campuses that each have hundreds of students and a dozen or so teachers. CTU has a BYOD preference for its learners as well. To minimize Operational overhead the students themselves will not have access to the Azure portal, this is also because CTU does not provide applications directly for students rather they use third party applications and pay for a subscription to those applications. CTU would benefit from a Cloud solution as it provides a more centralized storage solution that allows for all campuses to submit to, azure also has strong backup capabilities for auditing. This combined with Azures Security capabilities will ensure that all data is secure and well managed, on Security CTU handles ID numbers of students as well as their sponsors, it would be a good idea to ensure a high-end security solution for sensitive data like thsi . As leaking sensitive data like this could cause a severe reputation lost, like for example when campus online got hacked on 16/04/2025 it severely impacted the students trust in CTU. The scale of the solution will the same as most medium sized organizations as CTU has give or take a 100 teachers and essential staff members across the country.

Task3:

Azure Service	Purpose / Why you need it	Week it is used
Resource Group	A logical container used to manage azure resources	01
Virtual Network (VNet)	A virtual network in Azure	02

Virtual Machine (VM – B1s)	IaaS that allows to create a digital instance of a computer	03
Microsoft Entra ID	Azure's Identity solution	04
Network Security Group (NSG)	Controls in-outbound traffic in Azure resources	05
Azure Storage Account	Azure's storage location	05
Microsoft Defender for Cloud	Provides a robust and effective security solution for azure	06
Azure Monitor	Tracks as well as logs health and performance of azure services	07
Azure Cost Management	Allows for the creation of bills and spending limits in azure	08
