Network 731 Week1 Project Planning

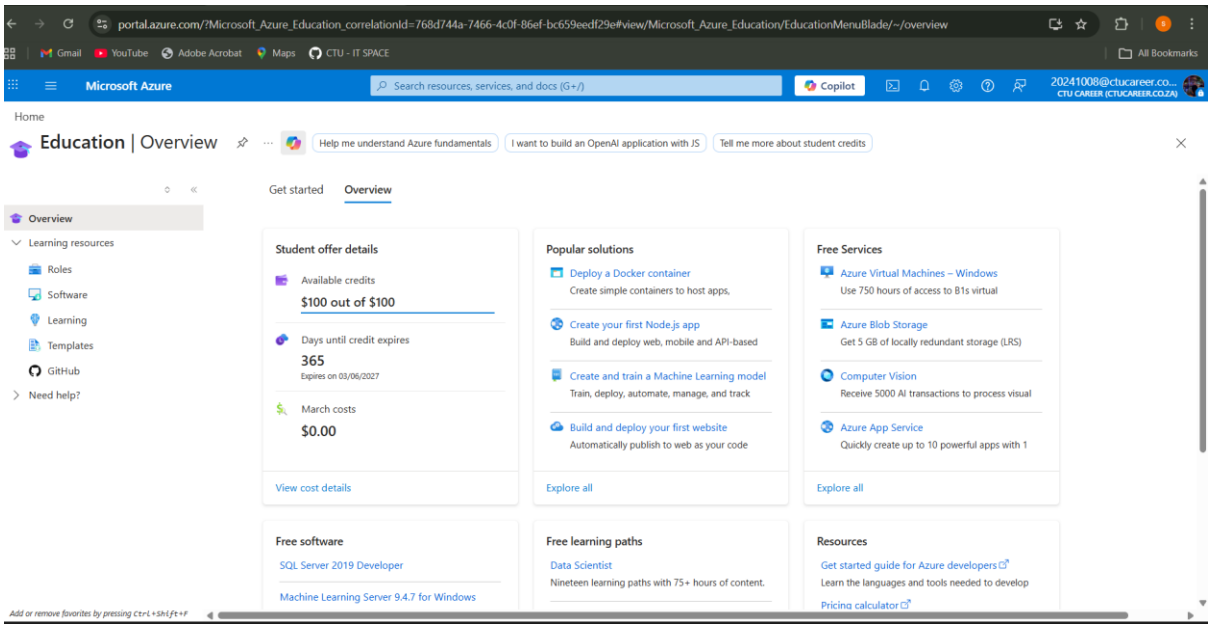
Sbongakonke Mfeya

Mr R. Ngwenya

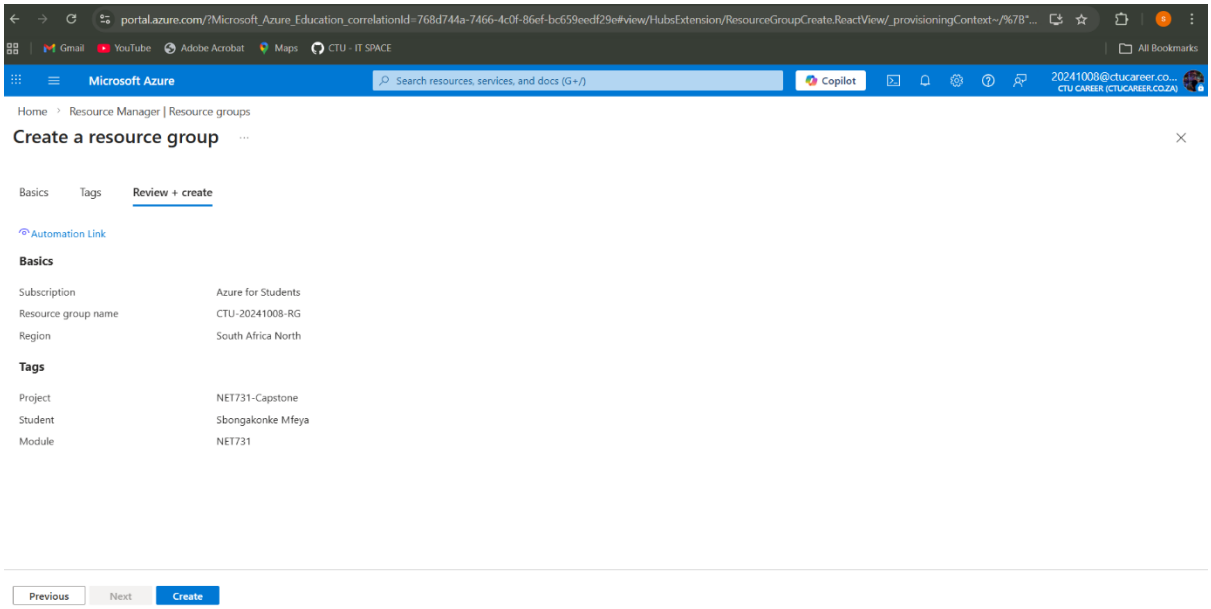
Business Requirements

CTU Training Solutions is a private higher education and training institution that requires a cloud-based, reliable, and scalable IT infrastructure environment to support its growing number of staff and students. They need a system that will allow access to learning platforms, student portals, course material, and financial information stored securely. Using Microsoft Azure (cloud solution), allows scalability of resources depending on the students and remote access for online students, and provides reliability compared to the traditional On-Premises infrastructure. Microsoft Azure allows administrators to manage infrastructure centrally without maintaining physical servers. Cloud-Based infrastructure can support several thousands of users.

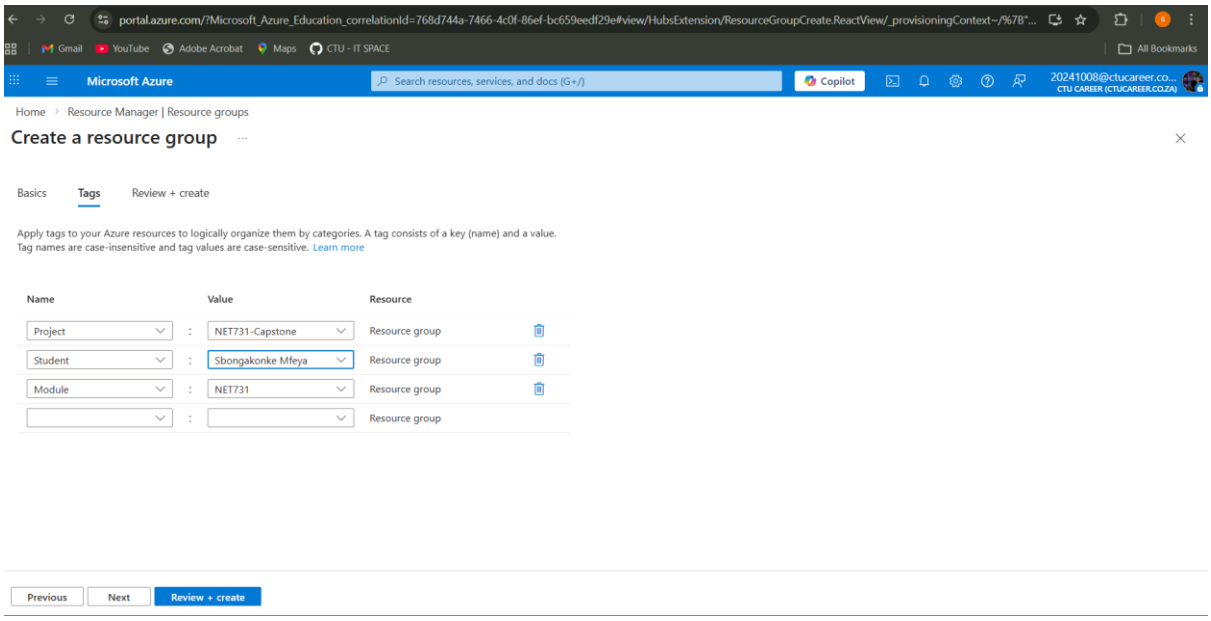
Azure Subscription showing $100 credit.



Resource Group overview.



Tagging Process



Azure Service	Purpose / Why you need it	Week it is used
Resource Group	For Organization of resources for CTU	Week 1
Microsoft Entra ID	For user authentication	Week1
