NET731 – Cloud Networking

Week 8 Practical: Cost Management

24 – 30 April 2026 | Total Marks: 8

Student Name: **_Mthunzelwa Makwanyane_** Student No: **_20241063_**

Task 1: Create Azure Budget Alerts

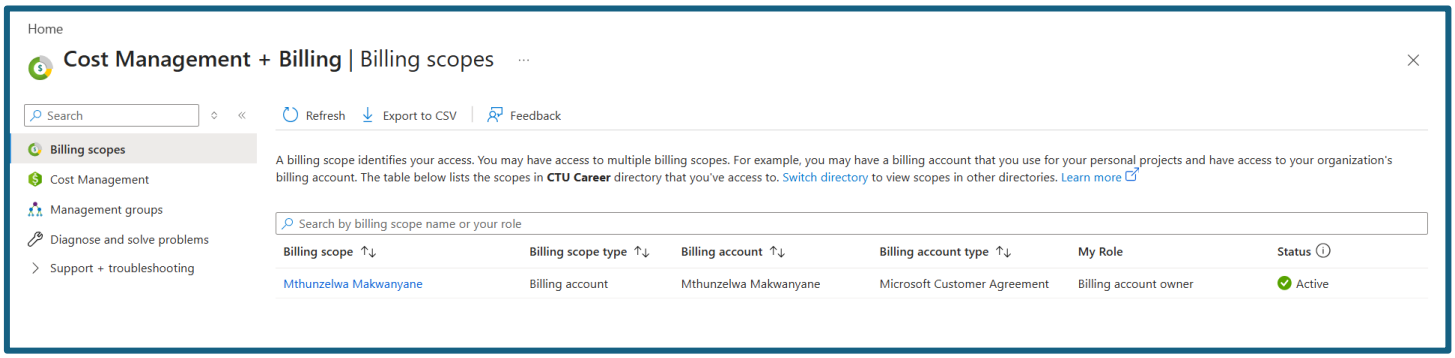

Figure 1: Locating the Budget Option in Cost Management and Billing

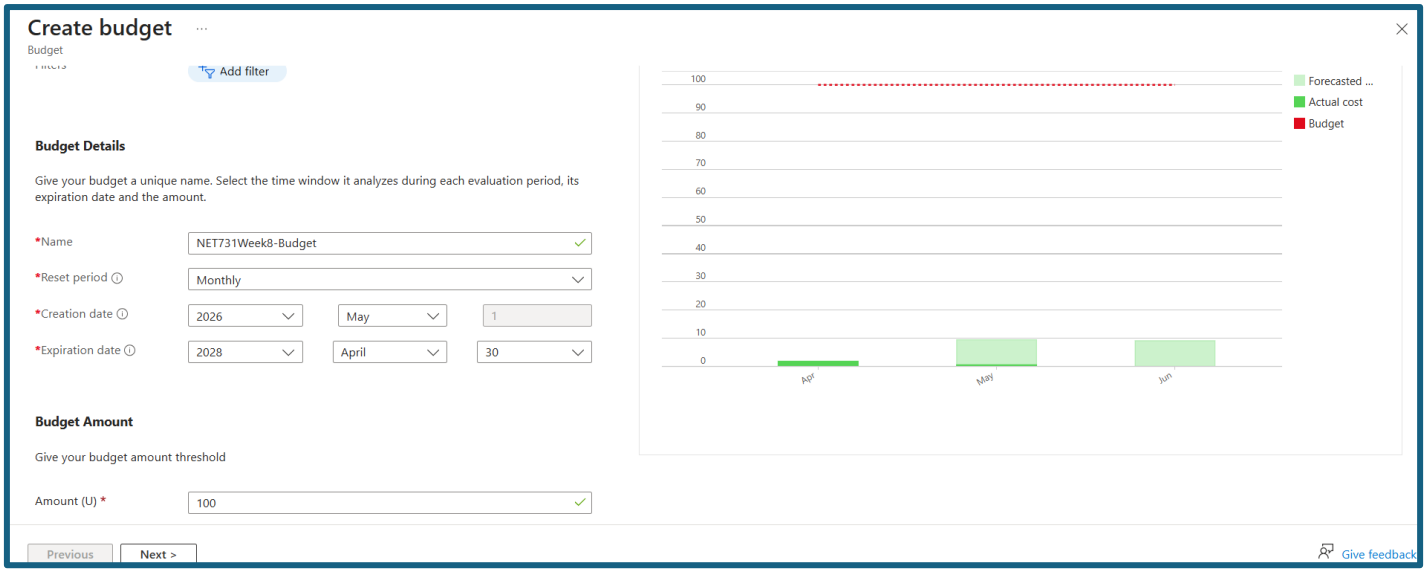

Figure 2: Configuring Budget amount

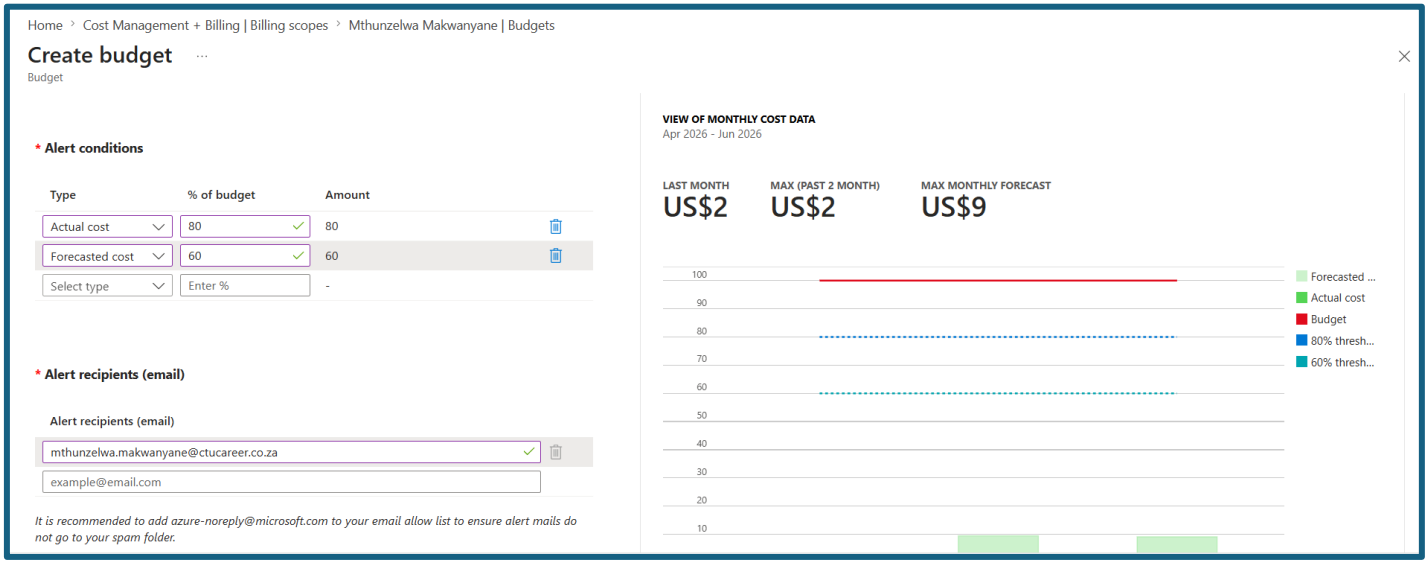

Figure 3: Configuring the Alert conditions recipient email

Task 2: Monitor Usage and Adjust Resource Settings

In my azure environment, the one of costliest resource by services is the storage therefore I figured reducing the amount of NSG rules could remediate the cost of storage overtime. I deleted one NSG rule because they can also cause an increase in network traffic logs.

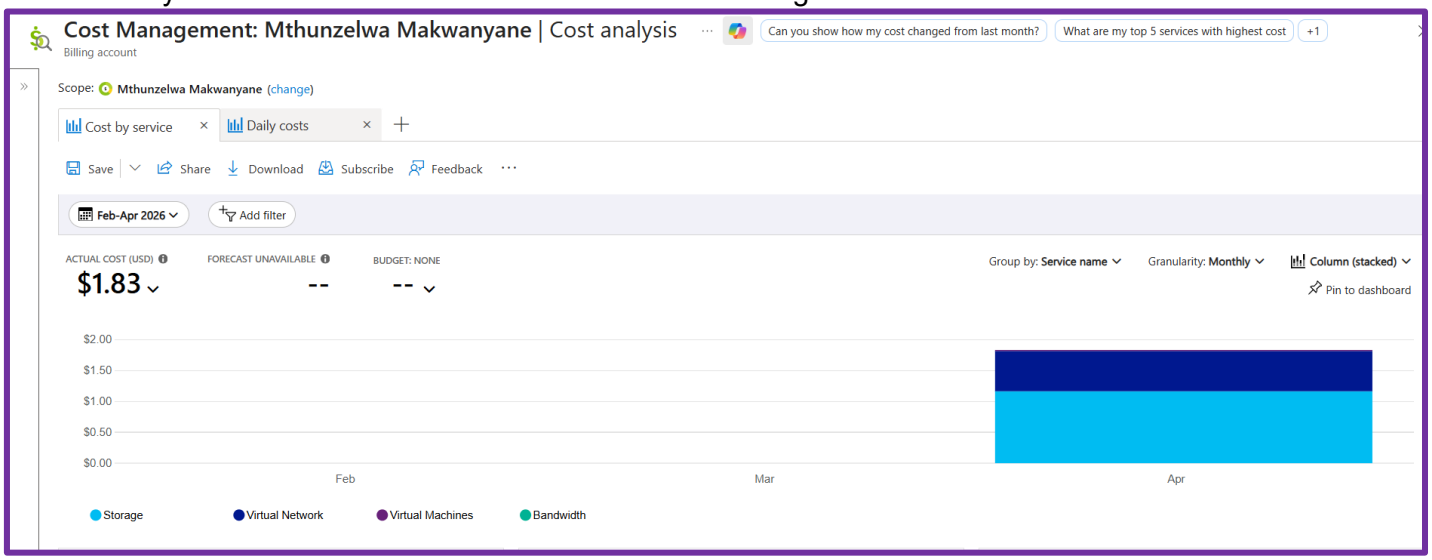

Figure 4: The Cost by service graph

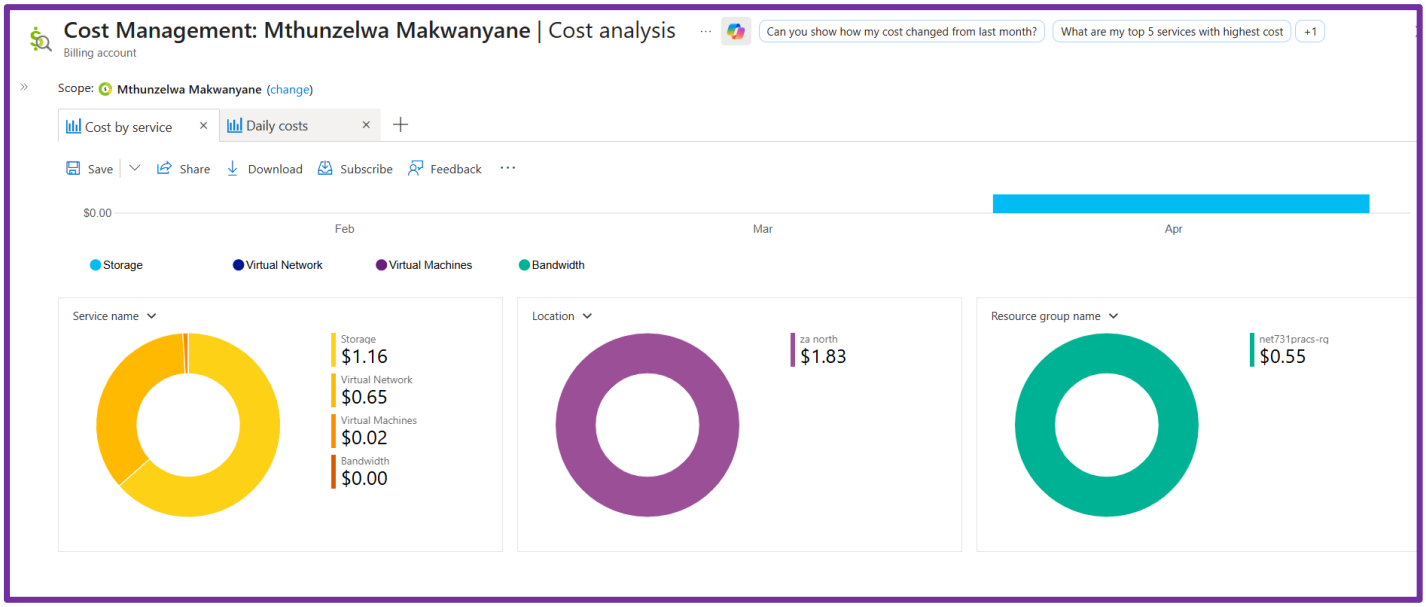

Figure 5: Pie Charts of service costs

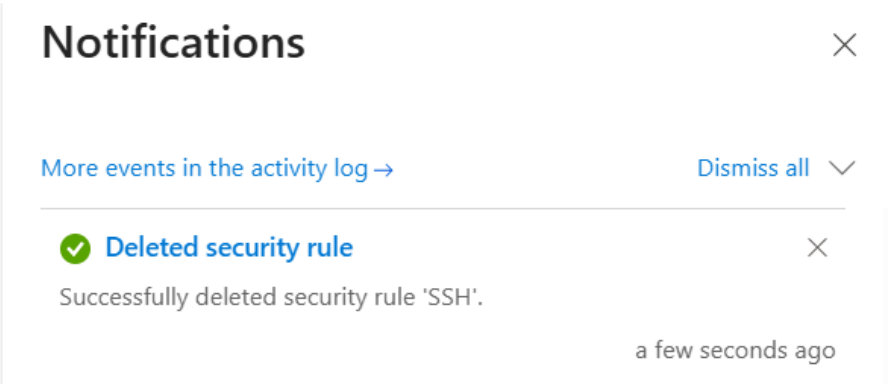

Figure 6: Notification of deleted NSG rule

Reflection Questions

1. What surprised you most about your Azure spending this week?
2. How would cost management differ if this were a production environment used by a real business?
3. What additional Azure Cost Management features would you explore if you had more time?

Answer: 1. There was not much of a surprise with my spending on azure this week because my most costly resource which is the virtual machine was turned off and not running so cost were relatively low.
Answer: 2. There would be a lot more resource groups and a lot more resources that account for much more costs
Answer: 3. An additional feature in Cost management I would want to explore is the azure advisor recommendations.

Marking Rubric – Week 8 (8 Marks)

Criterion	Marks	What to demonstrate
Budget alert configured correctly	**3**	Budget exists with correct scope, amount, and at least two alert thresholds. Screenshot provided.
Cost analysis and resource adjustment	**3**	Evidence of reviewing Cost Analysis, identifying expensive resources, and making at least one informed adjustment.
GitHub documentation	**2**	cost-report.md committed to repository with all required sections, screenshots included, and meaningful commit message.
